In real life, according to his biographers, Freud also faced stress and anxiety in the same manner that his patients did. After carefully studying his early life, biographers believe that they have unlocked the secret to Freuds own secret fears and frustration, which would later become anchors to his theories As a young medical practitioner, Freud dissected hundreds of eels to look for eel testicles. At that time, the origins, reproductive processes, and migratory behavior of eels were still mysteries that challenged the scientific community. After failing to locate the reproductive organs of the eels, Freud abandoned his buy acillin in Australia and chose the another field on which he could pour out his complete devotion as a man of science. His biographers often refer to this time in Freuds life as the starting point for the psychiatrists focus on human sexuality.

In his writings, Freud conveyed his belief that sexual desire was somewhat a motivational energy for life and viewed psychosexual development as the explanation for specific human thought and behavior. Aside from his work on psychosexual development, Freud was also concerned about overcoming depression through the Australia in oxcarbazepine buy of cocaine. It is not widely known that the psychiatrist was a user of cocaine, a substance that he believed to be useful as a stimulant and cure for depression. Long before antidepressant prescriptions were formulated and sold in pharmacies oxcarbazepine buy in Australia doctor-prescribed drugs, Freud was already convinced about the use of chemicals and other drug formulas to address emotional problems. Surely, if he were alive today, Freuds use of cocaine

would be frowned upon and will be considered illegal.

In fact, recent journals have focused on the correlation between Freuds cocaine use and his preoccupation with sexual desire as motivating factor.
